Solar thermal systems

Heating systems
Industrial systems
Refrigeration systems
Anyone investing in a new heating system today should design it from the outset to include a solar thermal system. This will allow you to benefit from lower energy consumption and also look forward to lower monthly energy bills.

By installing solar collectors, you are demonstrating your commitment to protecting the environment by sustainably lowering CO$_2$ emissions. By choosing Viessmann technology you are opting for a futureproof system in which all components interact optimally.

Investing in solar technology also increases the value of your property.

On the following pages, you will find comprehensive information about Viessmann solar technology and the possibilities it allows for energy efficient DHW heating and central heating backup.

With more than 40 years’ experience in the development and manufacture of solar thermal systems, you can count on our high quality and technical expertise.

All Viessmann systems are designed to work in combination with solar technology, so it makes no difference whether you opt for a new condensing boiler for oil or gas, a heating system for wood, or a heat pump.
Viessmann flat-plate and vacuum tube collectors meet every requirement for efficient and cost effective DHW heating and central heating backup.

**Saving energy and protecting the climate**

Find out why it is worth modernising your heating system now and incorporating an efficient solar thermal system. In doing so, you will be making an active and sustainable contribution towards protecting the climate and using less fossil fuel.

**ThermProtect: automatic overheating protection**

The unique ThermProtect automatic temperature-dependent shutdown in the Vitosol 200-FM and 100-FM flat-plate collectors, and the new Vitosol 300-TM and 200-TM tube collectors, reliably prevents collectors from overheating.

**Solar technology**

The flat-plate and vacuum tube collectors from the Vitosol series can be optimally matched to the relevant energy demand.

**Convenience and economy by design**

Use the most advanced system technology to control your heating and solar thermal system. The intelligent Vitosolic energy management system communicates very effectively with the heating control unit, significantly lowering heating bills.

**Service for every aspect of solar technology**

Make the most of our trade partners. They will tell you all you need to know about bespoke heating and solar technology, subsidy opportunities and finance options.

**The company**

The power of innovation: a family business for three generations, Viessmann offers state of the art technology and takes its responsibilities seriously.
Introduction

Global radiation kWh/(m² x year)
Saving energy and protecting the climate

Good reasons for incorporating Viessmann solar thermal technology into your heating system

In Germany alone, there are still around two million heating systems in use today that are more than 25 years old. Their owners are often completely unaware of how much energy these systems waste, as they allow a great deal of unused heat to simply escape up the chimney. Furthermore, these old systems have an impact on our climate through unnecessary CO₂ emissions which contribute to global warming.

Saving energy
By promptly replacing these systems with highly efficient condensing boilers, pellet boilers or heat pumps in combination with solar technology, end users can cut their energy consumption by up to 25 percent. This would translate into ten percent of Germany’s total energy needs, with annual CO₂ emissions simultaneously being reduced by 54 million tonnes.

Protecting our resources
Around one third of the total energy demand in Germany is expended on heating buildings. Energy conscious construction and economical heating systems, such as those that employ condensing technology, can substantially reduce this consumption. This then contributes to the preservation of resources and to the protection of the Earth’s atmosphere.

One important area of potential savings is offered by DHW heating. In our latitudes, solar collectors combined with a DHW cylinder represent the most interesting alternative to boiler operation, especially during the summer months. Even during spring and autumn, you may often be able to turn off your boiler when using solar energy to back up your central heating.

Public subsidies
Public subsidies can be claimed for the purchase of solar thermal systems in Germany. The investment outlay is recovered in just a few years because of the energy savings. Current details can be found at www.viessmann.de.

In a detached house, solar energy covers up to 60 percent of the energy required for DHW heating.

Energy efficiency class: A
In combination with solar collectors A+
DHW heating and central heating backup with solar energy

Solar thermal systems are the perfect choice for DHW heating and central heating backup. By harnessing freely available solar energy, you can save on the use of fossil fuels. What’s more, investments in solar thermal energy pay off in just a few years.

Fundamentally, you have the option of using solar energy for DHW heating and central heating backup. Savings on oil and gas are considerable in all cases, as you will be able to reduce your annual energy consumption by around 60 percent. This is the energy that would otherwise be required for your day to day DHW heating. If you combine the heating of DHW and heating water, you will save around 35 percent of the total energy required – every year.

Solar thermal system with dual mode DHW cylinder

A dual mode DHW cylinder is central to this type of system. When there is sufficient insolation, the solar medium in the solar thermal system heats up the water in the DHW cylinder via the lower indirect coil.

When the temperature drops through hot water being drawn off, such as for a bath or shower, the boiler starts – if necessary – to provide additional heating via the second circuit.

Solar thermal system for DHW heating and central heating backup

The solar medium heated in the solar collectors can be used to bring heating water and DHW up to temperature. For this, the heating circuit, via a heat exchanger, uses the water in the solar cylinder that is continuously heated by the solar collectors. The control unit checks whether the required room temperature can be achieved. If the temperature is below the set value, the boiler will also start.

With Viessmann, heating and solar technology come entirely from a single source. All components are perfectly matched.
ThermProtect, with its innovative automatic shutdown function, now protects both the Vitosol 200-FM / 100-FM flat-plate collectors, as well as the Vitosol 300-TM / 200-TM vacuum tube collectors, from overheating.

With ThermProtect automatic temperature-dependent shutdown in the Vitosol 200-FM and Vitosol 100-FM flat-plate collectors, Viessmann set a benchmark for efficient, operationally reliable solar thermal systems. Now Vitosol 300-TM and Vitosol 200-TM vacuum tube collectors also feature this automatic shutdown facility, for reliably preventing the collectors from overheating.

Solar thermal systems with ThermProtect: durable and reliable
Thanks to ThermProtect, large collector areas can also be realised without having to take stagnation into consideration during system engineering. Viessmann’s technology causes the collectors to shut down when a set temperature limit is reached.

The temperature-dependent shutdown functions completely independently of collector system configuration, control unit settings and installation location. The thermal loads on system components and the heat transfer medium always stay within their normal range. This increases service life and operational reliability, compared to conventional solar thermal systems.

Easy to install
Installation is easier, as there is no need for pre-cooling vessels or stagnation coolers. As the formation of steam from the heat transfer medium no longer has to be taken into consideration for the collectors, there are also more options when it comes to routing the hydraulic lines.
Vitosol 200-FM and 100-FM: crystals prevent overheating

A crystalline absorber coating on the Vitosol 200-FM and 100-FM flat-plate collectors controls energy absorption. In physical terms, the ThermProtect coating function is ensured by temperature-dependent changes in the structure of the crystals. At collector temperatures of around 75 °C and above, the reflection of incoming solar radiation is increased. Further temperature rises are limited, reliably preventing the formation of steam.

Once the temperature in the collector falls again, the crystalline structure returns to its original state. The energy drawn by the collector is then no longer irradiated back into the environment and can be used in the solar thermal system. There is no limit to the number of times the change in crystalline structure can be activated, making this function permanently available.

Vitosol 300-TM and 200-TM: heat pipe with automatic temperature-dependent shutdown

In the new Vitosol 300-TM and 200-TM vacuum tube collectors, a self-regulating heat pipe dry-connected inside the collector heat exchanger is responsible for ThermProtect automatic temperature-dependent shutdown. Solar energy causes the medium sealed inside the heat pipe to evaporate. When it reverts to its liquid state inside the condenser, the heat absorbed is transferred to the solar thermal system and the medium flows back to the sunlit area of the vacuum tube.

Once the temperature limit of approx. 120 °C is reached, the medium is no longer able to condense. Thanks to this phase-change temperature shutdown, heat transfer is interrupted and the system is thus protected against excessively high stagnation temperatures. Circulation in the heat pipe only restarts at lower collector temperatures, so that solar heat can once again be transferred into the heating system.
With a wide range of flat-plate and vacuum tube collectors, Viessmann provides flexible and individual solutions for every kind of modern heating system.

Every year, the sun radiates on average 1000 kWh onto every square metre of ground in central Europe. This corresponds to the energy content of 100 litres of fuel oil. With Viessmann solar collectors, you can utilise this energy to generate heat. A solar thermal system is the ideal extension to any heating system, and sustainably lowers energy consumption.

The heating system that loves the environment

Even when it comes to environmental compatibility, with Viessmann solar thermal systems you’ll be on the sunny side of the street: on average, carbon dioxide (CO₂) emissions are reduced by about three quarters of a tonne for a detached house.

Futureproof in every respect

All Viessmann flat-plate and tube collectors are distinguished by their high operational reliability and long service life. Vitosol solar collectors are made of corrosion and UV-resistant materials. This is most impressively verified by quality tests according to the EN 12975 test standard or ISO 9801, which at the same time confirm the consistently high thermal output.

Viessmann can draw on 30 years of experience in the development and manufacture of solar collectors.

Vitosol 200-T
VITOSOL 300-TM
VITOSOL 200-TM
Highly efficient vacuum tube collectors based on the heat pipe principle and ThermProtect

Effective use of the sun’s heat
The absorbers with highly selective coating collect a vast amount of solar energy and thereby ensure high efficiency. At the same time, the vacuum in the tubes provides very effective thermal insulation. This means there are almost no losses between the glass tubes and the absorber, enabling the collector to convert even low levels of insolation into useful energy. The vacuum tube collectors use the available insolation extremely efficiently, particularly in the spring and autumn, and in the winter when outside temperatures are low.

High energy yields for years to come
Viessmann solar collectors are designed for an exceptionally long service life. This is guaranteed by the use of high grade, corrosion-resistant materials, such as glass, aluminium, copper and stainless steel. The absorber is an integral part of the vacuum tube. This protects it from weather influences and contamination, and ensures high energy yields for years to come.

Heat pipe principle for high operational reliability
The Vitosol 300-TM and Vitosol 200-TM are highly efficient vacuum tube collectors based on the heat pipe principle.

In heat pipe systems, the solar medium does not flow directly through the tubes. Instead, a process medium evaporates in the heat pipe below the absorber and transfers the heat to the solar medium. The dry connection of the heat pipe tubes inside the header, the small amount of fluid inside the collector and ThermProtect automatic temperature-dependent shutdown ensure particularly high operational reliability.

Quick and safe installation
Vitosol tube collectors are delivered in a pre-assembled modular design. An innovative push-fit system enables the tubes to be quickly and easily installed. The tubes can be rotated individually for optimum alignment with the sun. The tubes are connected in a dry state, i.e. without direct contact between the process medium and the solar medium, allowing individual tubes to be replaced without draining the system. Individual collectors are interconnected by stainless steel corrugated push-fit connectors.
With the Vitosol 300-TM, Viessmann offers a high performance vacuum tube collector that meets the highest demands for safety and efficiency.

The Vitosol 300-TM high performance collector is one of the most efficient models on the market and is particularly recommended for use in restricted spaces. The absorber angle can be adjusted by +/-25° to deliver an exceptionally high yield, even when the sun is in less favourable positions. The collector can be installed and used in any position and is designed for use on detached houses and apartment buildings. It features ThermProtect automatic temperature-dependent shutdown, which is activated if heat draw-off stagnates for a long period whilst there is a high level of insolation.

Operational reliability with ThermProtect
The Vitosol 300-TM is currently the only collector on the market that can be installed horizontally (max. 3° tube incline) and includes ThermProtect automatic temperature-dependent shutdown. It prevents overheating of the collectors when no heat is drawn off and there is a high level of insolation. The Vitosol 300-TM is therefore also suitable for buildings that are not in use all year round, such as residential buildings during holiday periods.

Maximum heat transfer with Duotec
The collector works according to the heat pipe principle, where the solar medium does not flow directly through the tubes. Instead, a process medium evaporates inside the heat pipe and transfers the absorbed heat through condensation to the solar medium via the Duotec twin pipe heat exchanger. This method guarantees optimum heat transfer.

Exceptionally long service life
The Vitosol 300-TM is designed for an exceptionally long service life thanks to its high grade, corrosion-resistant materials, including glass, aluminium, copper and stainless steel. The absorber is an integral part of the vacuum tube. This protects it from weather influences and contamination, and ensures high energy yields for years to come.

Quick, straightforward and safe installation
The above roof installation system with rafter anchors simplifies the task of securing the collectors. The rafter hooks and flanges are designed to be fixed directly onto the rafters, enabling the collectors to be perfectly integrated into any kind of roof cover. The two mounting rails also save additional time during installation.

In systems with multiple collectors, dark blue cover panels create a seamless visual transition between the collector casing and absorber surfaces. Retaining caps in the base rail, in the same colour as the casing, prevent the tubes from slipping.

Should a service be required, heat pipe tubes can be replaced quickly and easily without having to drain the system, due to their dry connection.
Vitosol 300-TM offers universal application options

Vitosol 300-TM high performance vacuum tube collector (type SP3C)

Take advantage of these benefits

- Highly efficient vacuum tube collector based on the heat pipe principle, with ThermProtect automatic temperature-dependent shutdown for high operational reliability
- Protection against overheating during prolonged insolation
- Long service life due to low stagnation temperatures and prevention of steam forming within the system
- The absorber surfaces with highly selective coating, which are integrated into the vacuum tube, are not susceptible to contamination
- Efficient heat transfer through condensers fully surrounded by the copper Duotec twin pipe heat exchanger
- Optimum alignment with the sun, thanks to uncomplicated absorber alignment
- Dry connection, no contact between process medium and solar medium, i.e. individual tubes can be replaced whilst the system is fully charged
- Dark blue collector casing and absorber surfaces form a visually seamless whole
- Highly effective thermal insulation of the header casing for minimum thermal losses
- Easy, quick installation with the Viessmann installation and connection systems

For specification, see page 26
The Vitosol 200-TM is a highly efficient vacuum tube collector based on the heat pipe principle.

The Vitosol 200-TM vacuum tube collector has been designed specifically to be mounted horizontally in large systems on flat roofs and for apartment buildings. The absorbers can be rotated through 45° to best mirror the path of the sun without increased shading.

**Operational reliability with ThermProtect**

The new ThermProtect automatic temperature-dependent shutdown function prevents overheating when no heat is drawn off and there is a high level of insolation. The Vitosol 200-TM is therefore also suitable for buildings that are not in use all year round, such as schools.

**Maximum heat transfer**

The collector works according to the heat pipe principle, where the solar medium does not flow directly through the tubes. Instead, a process medium evaporates inside the heat pipe and transfers the heat through condensation to the solar medium via a copper heat exchanger. This method guarantees maximum and optimum heat transfer, as well as excellent operating and service characteristics.

**Quickly, simply and safely installed**

The header casing does not need to be opened when tubes are inserted. Retaining caps in the base rail prevent the tubes from slipping.

Should a service be required, the tubes can be replaced quickly, cost effectively and easily due to their dry connection, without having to drain the system.
Example of using Vitosol 200-TM tube collectors with ThermProtect

- Vacuum tube collectors based on the heat pipe principle with ThermProtect automatic temperature-dependent shutdown for high operational reliability
- Overall system has a long service life thanks to the automatic temperature-dependent shutdown during periods of stagnation in the summer
- Protection against overheating during prolonged insolation
- Dry connection, no contact between process medium and solar medium, i.e. individual tubes can be replaced whilst the system is fully charged
- Greater efficiency means less space is required than for flat-plate collectors
- Constantly high output without the risk of absorber contamination
- High levels of solar coverage, therefore suitable for central heating backup
- Designed for horizontal installation on flat roofs and larger systems
- Larger tube clearance, so less shading in horizontal flat roof installations
- Absorber can be rotated by up to +/-45°
- Lower service costs due to longer service life of solar components and pumps thanks to ThermProtect
- Comparatively low static load on the building due to reduced need for ballast in horizontal installations

Solar technology
Flat-plate collectors
Vitosol 200-FM
Vitosol 100-FM
Vitosol 200-FM
Vitosol 100-FM

Viessmann’s patented switching absorber layer protects high performance flat-plate collectors from overheating and stagnation.

The Vitosol 200-FM and Vitosol 100-FM high performance flat-plate collectors are the perfect addition to any heating system. With an individual absorber area of 2.3 m², solar collectors can be effectively matched to any energy demand. On average, they can replace up to 60 percent of the energy that would otherwise be required each year for DHW heating, as well as contributing to central heating backup. When used in conjunction with a condensing boiler, free solar energy can help you reduce your annual energy consumption for heating and DHW by over one third.

**ThermProtect prevents overheating**

An intelligent absorber layer protects the collectors from overheating. Viessmann’s patented ThermProtect technology prevents further energy absorption once a certain temperature has been reached, when the solar cylinder is fully heated. If the switching temperature is exceeded, the crystalline structure of the absorber layer changes, increasing the rate of heat radiation many times over and reducing collector output. The stagnation temperature thus drops significantly, preventing the formation of steam.

By lowering the collector temperature, the crystalline structure returns to its original state. More than 95 percent of the incoming solar energy can now be absorbed and converted into heat. Only the remaining five percent is reflected. There is no limit to the number of times the change in crystalline structure can be activated, making this function permanently available.

ThermProtect also leads to higher yields with the Vitosol 200-FM and Vitosol 100-FM compared to conventional flat-plate collectors, as more generous sizing is possible.
Solar technology
Flat-plate collectors

Vitosol 200-FM
Vitosol 100-FM

Attractive on any roof
The Vitosol 200-FM is the right choice if the collector is required with a frame in an individual RAL colour. It is finished in dark blue as standard and blends in with any roof. The Vitosol 100-FM is only available with an aluminium coloured frame.

The Vitosol 200-FM, type SV2G (vertical) or type SH2G (horizontal) can be selected for seamless roof integration, lying almost flush with the roof cladding when installed.

The Vitosol 200-F (type 5DIA) large area collector, with an absorber area of 4.87 m², is an alternative to individual collectors.

Permanently sealed and well insulated
The all-round folded aluminium frame and seamless pane mounting ensure permanent tightness and a highly stable collector. The back panel is puncture-proof and corrosion-resistant. Highly effective thermal insulation reduces heat losses, particularly in spring, autumn and winter.

Straightforward installation
Both collectors are particularly easy to install. The integral flow and return pipes enable safe installation, even for larger collector arrays, using flexible corrugated stainless steel pipe push-fit connectors. Up to twelve solar collectors can be easily linked together.

The flat-plate collectors can be used universally for above roof installation, roof integration and installation on collector supports, for example on flat roofs. The easy-to-assemble Viessmann fixing system consists of load-tested and corrosion-resistant components made from stainless steel and aluminium.

Vitosol 200-FM

Vitosol 200-FM
Two-family home, Geisenfeld

Collector frame with special roof integration profile for fitting the flashing frame
With optional edge trim in all RAL colours, the Vitosol solar collectors blend harmoniously into most roofs.

Vitosol 200-FM and Vitosol 100-FM high performance flat-plate collectors with ThermProtect switching absorber layer
- No overheating when outside temperatures are high or heat transfer is low
- Higher solar coverage for central heating backup and DHW heating
- Permanently sealed by all-round frame and seamless pane mounting
- Quick and reliable connection through flexible corrugated stainless steel pipe push-fit connectors
- Universally suitable for above roof installation, roof integration, flat roof installation, or wall mounting
- Can be installed horizontally or vertically
- Attractive design, individually finished in any RAL colour (Vitosol 200-FM)

For specifications, see pages 26 and 27
Viessmann’s DHW solar pack makes efficient and economical use of free solar energy for DHW heating.

The Viessmann 141-FM DHW solar pack is particularly suitable for modernisation projects and new builds. In terms of size, performance and price, it is intended specifically for detached houses. It provides an environmentally friendly, efficient and economically interesting solution for DHW heating with free solar energy.

The pack comprises two Vitosol 100-FM (type SVKF/SVKG) flat-plate collectors and the dual mode Vitocell 100-B/-W DHW cylinder with 250 litre capacity. It is a perfect way to extend a system at the same time as replacing an older boiler, or is ideal for new systems where the use of solar thermal energy is now standard.

**ThermProtect prevents overheating**
An intelligent absorber layer protects the Vitosol 100-FM collector from overheating. Viessmann’s patented ThermProtect technology prevents further energy absorption once a certain temperature has been reached. If the switching temperature is exceeded, the crystalline structure of the absorber layer changes, increasing the rate of heat radiation many times over, and reducing collector output. The stagnation temperature thus drops significantly, preventing the formation of steam.

By lowering the collector temperature, the crystalline structure returns to its original state. More than 95 percent of the incoming solar energy can now be absorbed and converted into heat. Only the remaining five percent is reflected. There is no limit to the number of times the change in crystalline structure can be activated, making this function permanently available.

ThermProtect also leads to higher yields with the Vitosol 100-FM compared to conventional flat-plate collectors, as the collectors can be restarted again more quickly if needed.

**Dual mode cylinder with Ceraprotect enamel coating**
The DHW cylinder with long lasting Ceraprotect enamel coating has two indirect coils for heating by solar collectors and reheating by a boiler. For the solar circuit, the Solar-Divicon with solar control module is already installed at the factory. Highly effective and efficient all-round insulation reduces heat loss.

**Straightforward installation**
For easy installation, all appliances and components are a perfect match for each other. Rafter hooks are used for above roof insulation. With roof integration, the flat-plate collectors are secured directly to the roof structure. No tools are needed to link the two collectors. The user benefits from the low investment outlay and quick installation of the DHW solar pack.

**Improved energy efficiency**
By combining solar thermal with a heat generator, energy efficiency class A+ (as a system label) can generally be achieved for the overall heating system.
Solar DHW heating for low energy bills
Quick and easy connection of the solar thermal system to the DHW cylinder
Solar control unit integrated in the Solar-Divicon and prefitted to the cylinder
Corrosion-resistant steel cylinder with Ceraprotect enamel coating
Surface-optimised flat-plate collector with absorber with highly selective coating
ThermProtect protects collector from overheating
Easy collector installation with rafter hooks
No tools needed to install collectors (push-fit system)
High efficiency pump for reduced power consumption
Many components are already integrated, saving precious space

Take advantage of these benefits

For specification, see page 27

Viessmann supplies you with all the technology you need from a single source.

For the complete solar thermal range, Viessmann offers optimally matching system technology from a single source. All components work together perfectly. This gives you the guarantee of outstanding efficiency and high operational reliability of your heating and solar thermal system.

The comprehensive Viessmann product range includes solar collectors, specially developed combi DHW cylinders for use with solar thermal systems, solar control units, the Solar-Divicon pump module for reliable hydraulics and thermal protection of solar thermal systems, plus oil and gas condensing boilers, wood boilers and heat pumps.

Correctly sized solar thermal systems with matching system components cover up to 60 percent of the annual energy demand for DHW heating of detached and two-family houses, or up to 35 percent of the total demand of low energy houses for DHW and central heating.

System technology

Convenience and cost efficiency by design

Viessmann supplies you with all the technology you need from a single source.
**DHW cylinders**
The Vitocell range comprising dual mode DHW cylinders, combi cylinders and heating water buffer cylinders, offers a cylinder to suit every need and is perfectly matched to the solar thermal system.

**Solar control units**
With Vitosolic solar control units, solar energy is used particularly effectively. The intelligent energy management system covers all conventional applications and can control up to four separate consumers. By communicating with the Vitotronic boiler control unit, the Vitosolic ensures that optimum use is made of the heat captured by the solar collectors, and that as little additional energy as possible is used for DHW or central heating.

**Solar-Divicon**
The solar pump assembly is distinguished by its elegant and compact design. The thermal insulation encases all components and reduces heat losses to a minimum.

**Connectivity**
With Vitoconnect 100 and a smartphone, operating Viessmann heating systems couldn’t be easier. The Vitotrol app enables the remote control of heating systems in conjunction with solar collectors. The app is available for mobile devices with iOS or Android operating systems.
With our trade partners, you're in good hands

For Viessmann, proximity to trade partners is the basis of the company’s success. You too can benefit from their expertise if you choose Viessmann heating technology.

You can receive advice and have access to sales, installation and customer service exclusively via Viessmann trade partners, who are trained regularly by the company, and have in-depth knowledge of its products.

Take advantage of the comprehensive service you can expect from your heating contractor.
Some service examples
- Free, no-obligation and individual advice, even on site
- Clear calculation of heating cost savings after the modernisation of your heating system – also in combination with solar collectors, of course
- Calculation of the payback period, after which the new heating system will have paid for itself through energy savings
- Calculation of the actual heating and DHW demand for your household or property
- Information on the most viable combination of a new heating system with a solar thermal system for central heating backup and DHW heating
- Up to date information about public subsidy programmes that could help to finance your new heating system and solar thermal system
- Support in applying for subsidies

Technology from Viessmann – subsidies from the public purse
You don’t just save on running costs. Energy saving and environmentally responsible heating technology is also financially supported by local, regional and national bodies, as well as by your local power supply utility.

So find out more about the various subsidies that may be on offer. Up to date information can be found on the internet at www.viessmann.de/foerderprogramme, or ask your heating contractor.

Attractive finance – invest now and save on heating costs immediately
With the Viessmann finance model, you can start saving straight away, and turn your plans into reality. The fast and reliable process, with no red tape, makes your modernisation project easier, allowing your financial planning to remain flexible.

The special advantage to you is that with Viessmann’s favourable terms, you generally save much more on heating costs than you spend on finance.

Please note:
Applications for subsidies and finance must be made before the heating and/or solar thermal system is purchased. Subsidies and finance agreements cannot be arranged retrospectively.

Detailed information regarding the Viessmann finance model can be obtained from your local heating contractor.

Terms and conditions to shout about
If you invest now in a solar thermal system for your property, you may be eligible for an attractive finance package from Viessmann in conjunction with CreditPlus Bank: just 3.99 percent* effective APR.

* Over 24 months
Viessmann is one of the leading international manufacturers of efficient heating, industrial and refrigeration systems.

**Acting in a sustainable manner**

As a family business Viessmann takes the long view and places great value on acting responsibly; sustainability is firmly enshrined in the company’s principles. For Viessmann, sustainability in action means striking a balance between economy, ecology and social responsibility throughout the company; meeting current needs without compromising the quality of life of future generations.

With its strategic sustainability project, Viessmann demonstrates at its own head office in Allendorf (Eder) that the energy and climate policy goals set by the German government for 2050 can in fact be achieved today with the help of commercially available technology.

**The Viessmann comprehensive range**

As environmental pioneer and technological trailblazer for the heating sector, Viessmann has for decades been supplying exceptionally clean and efficient systems for heating, refrigeration and decentralised power generation. Many of the company’s developments are recognised as heating equipment milestones.

**Practical partnership**

As part of its comprehensive range, Viessmann also offers a wide selection of complementary services. These services include a comprehensive training and further development programme for trade partners at the well equipped training facilities of the Viessmann Academy.

With its new digital services, Viessmann offers innovative solutions such as the operation and monitoring of heating systems by smartphone. Users benefit from greater reassurance and convenience, whilst contractors can keep a constant eye on the systems for which they are responsible.

**Viessmann Group**

**Company details**
- Established in: 1917
- Employees: 12,000
- Group turnover: 2.25 billion euros
- Export share: 54 percent
- 23 production companies in 12 countries
- 74 countries with sales companies and branches
- 120 sales offices worldwide

**Comprehensive range from the Viessmann Group**
- Boilers for oil or gas
- Combined heat and power generation
- Hybrid appliances
- Heat pumps
- Wood combustion technology
- Biogas production plants
- Biogas upgrading plants
- Solar thermal
- Photovoltaics
- Accessories
- Refrigeration systems
